

ARLISS 2011

16/09/2011

Team: Harahetto

The University of Electro-
Communications

THIS IS OUR ROVER !

Arduino + H8 based rover with multiple sensors

Light
Shock
Accelerate

Two main techniques

① Servo motor based parachute separating module

② Two staged parachute

Drifted **less**
by winds

Drifted **more**
by winds but
Safe when landing

Result: 1st Flight

New record of our lab !!!

So close to
the goal !!!

Result: 2nd Flight

Got tangled when sub parachute is separated

Damn it !!!
Our rover was
almost running

Thank you so much for Aeropack members
and All the staff of ARLISS 2011 !!!
