

4.31 Tokai University Satellite Project

Tokai university satellite project will launch an artificial satellite that was made at the hands of students, that aims to contribute to space development in the future.

Members of the project belongs from a first grader students to master's students and learns various techniques or project management through activity.

Currently, fabsat project is underway to develop Flight Model completion, and launch of the satellite project. We consider a mission of fabsat and learn a technique of bus system development.

New students produces Cansat as introduction of satellite.
